SUMMARY

Software developer with 1+ years of production experience across React, Node.js, Python, and Docker, now pursuing an entry-level Game QA / Tester role. Genuine gamer across mobile, PC, and console platforms. Brings a builder's instinct for systematic quality checks, precise bug documentation, and enough technical fluency to communicate root causes clearly with engineering teams — developed by shipping and maintaining production features, not testing theory.

SKILLS

QA-Relevant Strengths: Bug Identification & Root-Cause Analysis · Cross-Platform / Cross-Environment Verification · Systematic Edge-Case Testing · Clear Technical Documentation

Engineering Toolkit: JavaScript, TypeScript, React, Node.js, Python, REST APIs, SQL (MySQL, PostgreSQL), Docker, Git

Process: Agile, Scrum

EXPERIENCE

Digital Blanket Pvt Ltd — Full Stack Software Developer 04/2025 – 06/2026

Bengaluru, India

Analytics Tool (Apache Superset)

- Evaluated two analytics platforms against product requirements, then led the migration to Superset — cutting report-build time from ~2 developer-days to under 2 hours per report, and removing the need for developer involvement so analysts could self-serve
- Built and verified 5 custom chart plugins from scratch with no native framework support — required exhaustive testing across chart types, data shapes, and edge cases
- Implemented and validated JWT-based authentication across integration points to catch access and security issues before release

New UI Redesign

- Diagnosed navigation and performance defects across 800+ legacy screens, then architected a 3-panel React UI to systematically resolve them
- Designed a dynamic, config-driven rendering adapter (Node.js) that cut per-screen migration time from ~3 days to under half a day — validated across dozens of API response shapes and edge cases
- Built and validated an API merger layer consolidating multiple backend endpoints, checking for data consistency across the merged surface

3D Digital Twin

- Built and stress-tested a browser-based 3D floor-plan generator (Babylon.js), successfully converting 20+ uploaded 2D SVG floor plans into interactive 3D models while handling malformed and edge-case inputs gracefully

EDUCATION

M S Ramaiah Institute of Technology — B.E. in Computer Science 06/2025

Bangalore, India · GPA: 8.7

Sri Venkateshwara Polytechnic — Diploma in Computer Science and Engineering 04/2022

Bangalore, India · GPA: 93.72%
