

Game Title: **Little Sheep Valley**

Date: 16-Aug-2026

Platform: MacOS

Total Bugs: 3

- High Severity: 1
 - Medium Severity: 1
 - Low Severity: 1
-

Bug #1

Desc: The walking and sprinting animations for the main character are not smooth. There is a noticeable jittering effect that does not appear to be intentional. This becomes more evident while sprinting.

Severity: High

This is a very evident bug/glitch that is very easily visible to a player and not very rare or subtle. This can shift the users attention from the gameplay

Steps to reproduce:

1. Open "The Valley" map (which is also the only map available).
2. Start Walking/Running and focus the camera on the player's front view then the jitter is very visible. 🚩 Bug #1

Expected behaviour: Smooth walking and sprinting animation.

Bug #2

Desc: The tutorial circle indicating the sheep's needs is positioned slightly above the actual area.

Severity: Low

This bug occurs only during the tutorial phase and does not significantly impact gameplay. While harmless, it may be confusing for new players.

Steps to reproduce:

1. Start a new game. While going through the tutorials just stop before the “New Sheep” unlocking part.
2. After unlocking a new sheep enter “caring mode” i.e go near the sheep and press RMB. This will popup a tutorial window and a red circle highlights the sheep needs which is the bug area.

The mismarked circle above the sheep needs.

3. Just after the “Individual needs” popup when you press ‘E’ to continue a second popup about sheep “Affection” with the same mis-alignment issue appears

The circle misaligned instead of aligning on the three heart images

Expected Behaviour: The circle aligned properly on top of the sheep needs area and the affection level up hearts.

Bug #3

Desc: Sheep can be accidentally trapped using decorations, or trapped within a Shearing Station.

Severity: Medium

Steps to reproduce:

1. When a sheep is waiting in the **Shearing Station** trap the sheep using a **Simple Fence** found inside the **Decorations** tab in **Build mode** (Press B).
2. Once trapped, the sheep cannot access food, leading to starvation. Additionally, this prevents other sheep from entering the Station.

Sheep trapped within a Shearing Station

Expected Behaviour: If this behavior is unintended, the expected behavior would be to restrict fence placement near the Shearing Station to ensure pathing remains clear.
